

Enterprise Mobility: How Secure is Your Organization?

Insights from the 2015 Mobility Risk Study

The Bad News:

Organizations Are Not as Secure as Security Leaders Believe

When it comes to mobility, enterprises are not nearly as secure as their security leaders believe them to be. In a global survey of 400 information security executives:

44%

44 percent rate themselves at above average or superior when self-assessing their organizations' mobility security.

But At The Same Time, These Same Leaders Reveal:

42%

42 percent suffered a mobility-related security incident in the past year.

32%

32 percent do not even have a current mobility security policy in place.

25%

Only 25 percent are very confident their organizations have the right technology in place to minimize the impact of mobility threats.

The Good News:

**Security Leaders Are in the Right Position to Improve
Mobility Security**

The survey results reveal encouraging news for organizations looking to improve mobility security in 2015:

69 percent expect budget increases for mobility security in 2015.

69%

80 percent of organizations have security leaders who have meaningful influence over these budgets.

80%

19 percent of organizations have security leaders who have bottom-line authority over mobility security budgets.

19%

Action Items for the 2015 Mobility Security Agenda

Multiple actions are needed for organizations to strengthen enterprise mobility security. These are the core strategic elements:

Know Thy User

Develop policies and deploy controls that adequately identify, provision and secure distinct user groups.

Think Beyond Device Management

Invest in more advanced security controls, including secure containers for data and apps, as well as contextual security controls.

Build the Business Case

Talk to senior leaders about how enterprise mobility must be managed and secured - from enforcing effective policies to deploying advanced controls.
